Recap: representation theory of finite groups

Restrict to **complex** representations, we have a nice theory:

- Any representation can be written as a direct sum of irreducible representation:
- We can extract information of irreducible representations from the **character table**:

#{irreducible representations} = #{conjugation classes}
$$\sum_{\chi: \text{irr}} (\dim \chi)^2 = \#G$$

However, in general,

- NO standard way finding an explicit construction of all irreducible representations;
 NO one-to-one correspondence between irreducible
 - representations and conjugation classes.

In this talk, we use two methods to understand representations of S_n , and find connections/analogs between them.

methods	objects
combinatorial	Young diagram, Young tableau
geometrical	Springer fiber of $SL_n(\mathbb{C})$, irreducible components

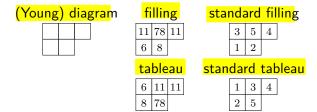

Xiaoxiang Zhou Bonn uni Springer Fibers for $SL_n(\mathbb{C})$

Goal of the Part I

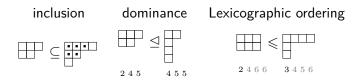

- Explicitly construct irreducible representations of S_n by Young diagram;
- Compute the character table;
 - $\dim \chi_i$ by recursion / Hook length formula
 - character by Frobenius formula
- Compute other representations.
 - e.g. \otimes , Sym^m, Λ^m ;
 - \bullet e.g. M_{λ} .
 - restriction and induced representation

Notation

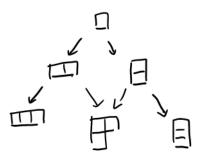

For boxes:

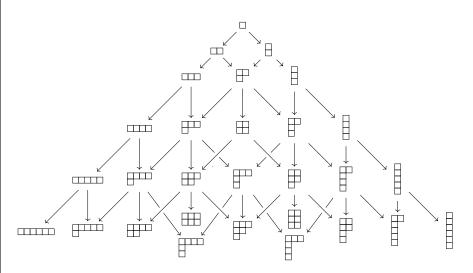

Order of Young diagram:

tree of Young diagram

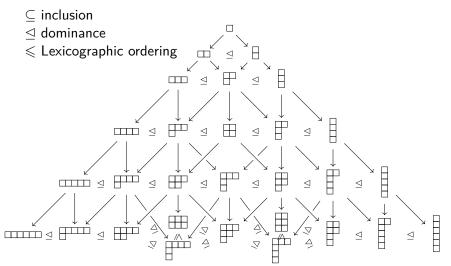

tree of Young diagram

Order

S_n & Young diagram

Proposition

We have the one-to-one correspondence

Example

$$n = 11$$
.

S_n & Young diagram

Proposition

We have the one-to-one correspondence

$$\left\{ \begin{array}{c} \textit{Young diagram} \\ \textit{of } n \textit{ boxes} \end{array} \right\} \stackrel{\textit{partition of } n}{\overleftarrow{\lambda = \lambda_1^{v_1} \cdots \lambda_k^{v_k}}} \left\{ \begin{array}{c} \textit{Conjugation class} \\ \textit{of } S_n \end{array} \right\}$$

Claim

$$\left\{ \begin{array}{c} \textit{Young diagram} \\ \textit{of } n \textit{ boxes} \end{array} \right\} \xleftarrow{?} \left\{ \begin{array}{c} \textit{Irreducible rep} \\ \textit{of } S_n \end{array} \right\}$$

S_n & Young diagram

Claim

$$\left\{ \begin{array}{c} \textit{Young diagram} \\ \textit{of } n \textit{ boxes} \end{array} \right\} \xleftarrow{?} \left\{ \begin{array}{c} \textit{Irreducible rep} \\ \textit{of } S_n \end{array} \right\}$$

Remark

Reduced to: for each Young diagram λ , construct an irreducible representation S^{λ} , and prove $S^{\lambda} = S^{\lambda'} \Rightarrow \lambda = \lambda'$.

Tabloid: equivalence class of standard filling

$$\begin{bmatrix} 3 & 5 & 4 \\ 1 & 2 \end{bmatrix} = \begin{bmatrix} 3 & 4 & 5 \\ 2 & 1 \end{bmatrix} = \begin{bmatrix} 3 & 4 & 5 \\ 1 & 2 \end{bmatrix} = \begin{bmatrix} 3 & 4 & 5 \\ 1 & 2 \end{bmatrix}$$

$$\begin{cases} \text{Standard filling} \\ \text{of shape} \\ \lambda \end{cases} \Rightarrow T = \frac{3 \cdot 5 \cdot 4}{1 \cdot 1 \cdot 1}$$

$$T^{\lambda} := \begin{cases} \text{Young tabloid} \\ \text{of shape} \\ \lambda \end{cases} \Rightarrow T^{\frac{3}{3}} = \frac{3 \cdot 5 \cdot 4}{1 \cdot 1 \cdot 1} = \frac{3 \cdot 5 \cdot 4}{1 \cdot 1 \cdot 1}$$

$$\mathcal{T}^{\lambda} := \{ \text{Young tabloid of shape } \lambda \}$$

$$M^{\lambda} := \left\langle \{T\} \in \mathcal{T}^{\lambda} \right\rangle_{\mathbb{C}}$$

Choose a standard filling T of shape λ ,

$$C(T) := \{ \sigma \in S_n | \sigma \text{ preserves numbers in each column} \}$$

$$v_T := \sum_{\sigma \in C(T)} \operatorname{sgn}(\sigma) \{ \sigma \cdot T \} \in M^{\lambda}$$

$$S^{\lambda} := \mathbb{C}[S_n] \cdot v_T \subseteq M^{\lambda}$$

invariant subspace of M^{λ}

$$\mathcal{T}^{\lambda}:=\{\text{Young tabloid of shape }\lambda\}$$

$$M^{\lambda}:=\left\langle \{T\}\in\mathcal{T}^{\lambda}\right\rangle _{\mathbb{C}}$$

$$\mathcal{T}^{\lambda} = \begin{cases} \{123/45\}, \{12\overline{4/35}\}, \{125/34\}, \{134/25\}, \{135/24\}, \\ \{145/23\}, \{234/15\}, \{235/14\}, \{245/13\}, \{345/12\} \end{cases}$$

$$\underline{M^{\lambda}} = \begin{cases} \{123/45\}, \{124/35\}, \{125/34\}, \{134/25\}, \{135/24\}, \\ \{145/23\}, \{234/15\}, \{235/14\}, \{245/13\}, \{345/12\} \end{cases}_{\mathbb{C}}$$

$$\begin{split} v_T := \sum_{\sigma \in C(T)} \mathrm{sgn}(\sigma) \{\sigma \cdot T\} \in M^\lambda & \sigma v_T = v_{\sigma T} \\ S^\lambda := \mathbb{C}[S_n] \cdot v_T \subseteq M^\lambda & \text{invariant subspace of } M^\lambda \end{split}$$

Example
$$(\lambda = 3 \cdot 2)$$

$$T = \boxed{354}$$

$$C(T) = { Id, (23), (15), (23)(15) }$$

$$S^{\lambda} = \langle v_T \rangle_{\mathbb{C}[S_n]} = \frac{\langle v_{T'} | T' : \text{standard filling} \rangle_{\mathbb{C}}}{|V_T|}$$

Gaoxiang Zhou Bonn u

Main theorem of S^{λ}

Theorem

Fix the Young diagram λ , the corresponding representation S^{λ} has the following properties:

- the linear space S^{λ} has a **basis** $\{v_{T'}|T': standard\ tableau\}$, especially, $\dim S^{\lambda}=\#\{standard\ tableau\}$;
- ② the representation S^{λ} is **irreducible**;
- **1** for the Young diagram λ' , $S^{\lambda'} \cong S^{\lambda} \Rightarrow \lambda' = \lambda$.

Proof: basis

Theorem

• the linear space S^{λ} has a basis $\{v_{T'}|T': \text{standard tableau}\}$, especially, $\dim S^{\lambda} = \#\{\text{standard tableau}\}$;

Idea of the proof

• S^{λ} is generated by $\{v_{T'}|T': \text{standard filling}\}$, It's not an easy task to represent $v_{T'}$ by linear combinations.

e.g.
$$V_{\frac{315}{410}} \stackrel{\text{column}}{=} V_{\frac{319}{410}} \stackrel{\text{row}}{=} V_{\frac{139}{410}} - V_{\frac{139}{410}}$$

• $\{v_{T'}|T': \text{standard tableau}\}$ are linear independent.

e.g.
$$x.V_{123}$$
 + x_2V_{123} + x_3V_{133} + x_4V_{133} = x_5 x_5

(4日) (部) (注) (注) 注 りなる

linear ordering

We use a linear ordering of standard fillings by

In the proof, we knock out the biggest one.

Theorem

- \bigcirc the representation S^{λ} is irreducible;
- **3** for the Young diagram λ' , $S^{\lambda'} \cong S^{\lambda} \Rightarrow \lambda' = \lambda$.

We have to introduce element b_T in $\mathbb{C}[S_n]$ by fix T of shape λ $b_T:=\sum_{g\in C(T)}\operatorname{sgn}(\sigma)\sigma$

one can get

$$b_T S^{\lambda} = \mathbb{C} v_T \neq 0, \qquad b_T S^{\lambda'} = 0 \quad \text{for } \lambda' > \lambda.$$

The results follow from these equations.

Theorem

- 2 the representation S^{λ} is irreducible;
- **3** for the Young diagram λ' , $S^{\lambda'} \cong S^{\lambda} \Rightarrow \lambda' = \lambda$.

We have to introduce element b_T in $\mathbb{C}[S_n]$ by

$$b_T := \sum_{q \in C(T)} \operatorname{sgn}(\sigma) \sigma$$

then

$$v_T = b_T \cdot \{T\};$$

•
$$\tau(b_T) = \operatorname{sgn}(\tau)b_T$$

for any
$$\tau \in C(T)$$
;

$$\bullet \ b_T \cdot b_T = \#C(T) \cdot b_T;$$

•
$$b_T M^{\lambda} = b_T S^{\lambda} = \mathbb{C} v_T \neq 0$$
;
 $b_T M^{\lambda'} = b_T S^{\lambda'} = 0$

for
$$\lambda' > \lambda$$
.

$\mathsf{Theorem}$

- ② the representation S^{λ} is irreducible;
- **1** for the Young diagram λ' , $S^{\lambda'} \cong S^{\lambda} \Rightarrow \lambda' = \lambda$.

$$b_T S^{\lambda} = \mathbb{C} v_T \neq 0$$
;
 $b_T S^{\lambda'} = 0$ for $\lambda' > \lambda$

*To show S^λ is irreducible: only need to show indecomposablility. If $S^\lambda=V\oplus W$ as $\mathbb{C}[S_n]$ -module, then

$$\mathbb{C}v_T = b_T S^{\lambda} = b_T V \oplus b_T W$$

$$\Rightarrow b_T V = \mathbb{C}v_T \qquad (\text{or } b_T W = \mathbb{C}v_T)$$

$$\Rightarrow S^{\lambda} = \mathbb{C}[S_n] \cdot v_T = \mathbb{C}[S_n] \cdot \mathbb{C}v_T = \mathbb{C}[S_n] \cdot b_T V \subseteq V$$

Bonn uni

Theorem

- **2** the representation S^{λ} is irreducible;
- **1** for the Young diagram λ' , $S^{\lambda'} \cong S^{\lambda} \Rightarrow \lambda' = \lambda$.

$$b_T S^{\lambda} = \mathbb{C} v_T \neq 0$$
;
 $b_T S^{\lambda'} = 0$ for $\lambda' > \lambda$

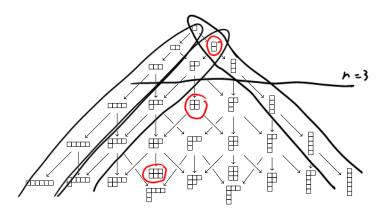

*To show $S^{\lambda'} \cong S^{\lambda} \Rightarrow \lambda' = \lambda$: If not w.l.o.g. suppose $\lambda' > \lambda$. Then

$$b_T S^{\lambda'} = b_T S^{\lambda} \Longrightarrow \mathbb{C} v_T \cong 0,$$

contradiction!

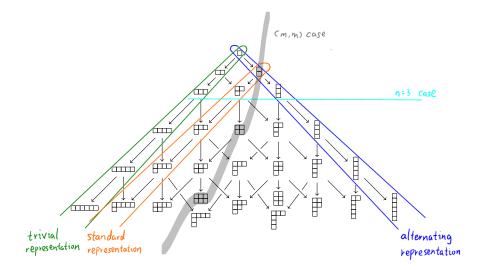

Example

Example

Example: trivial representation

$$\lambda = \square \square = 3^{1}$$

$$M^{\lambda} = \langle \{123\} \rangle = \mathbb{C}$$

$$T = \boxed{1 2 3}$$

$$C(T) = \text{Id}$$

$$v_{T} = \{123\}$$

$$S^{\lambda} = \mathbb{C}[S_{3}] \cdot v_{T} = \boxed{\mathbb{C}v_{T}}$$

Example: alternating representation

$$\lambda = \begin{bmatrix} 1 \\ 1/2/3 \\ 1/3/2 \\ 1/$$

Xiaoxiang Zhou

Example: standard representation

$$\lambda = \Box = 2 \cdot 1$$

$$M^{\lambda} = \langle \{12/3\}, \{13/2\}, \{23/1\} \rangle_{\mathbb{C}}$$

$$T = \begin{bmatrix} 1 & 2 \\ 3 & \end{bmatrix}$$

$$C(T) = \{ \text{Id}, (13) \}$$

$$v_T = \{12/3\} - \{23/1\}$$

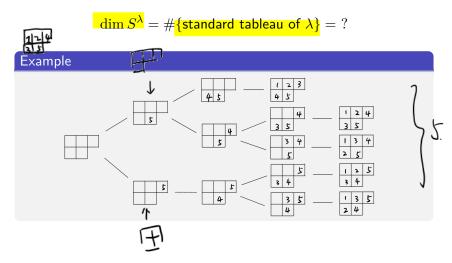

$$S^{\lambda} = \mathbb{C}[S_3] \cdot v_T \cong \mathbb{C}^2$$

$$(12)v_T = \{12/3\} - \{13/2\}$$

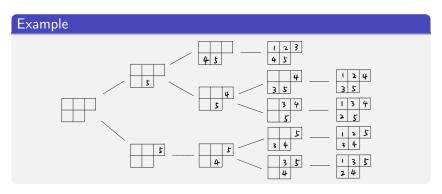

$$(13)v_T = \{23/1\} - \{12/3\} = -v_T$$

Goal of the Part 1

- Explicitly construct irreducible representations of S_n by Young diagram;
- Compute the character table;
 - dim S by recursion / Hook length formula
 - character by Frobenius formula
- Compute other representations.
 - e.g. \otimes , Sym^m , Λ^m ;
 - \bullet e.g. M_{λ} .
 - restriction and induced representation

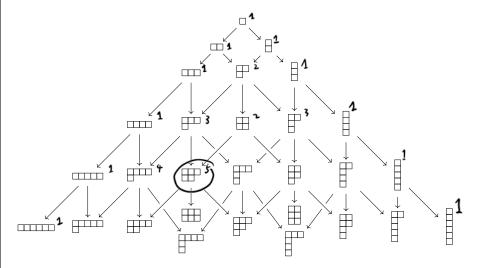

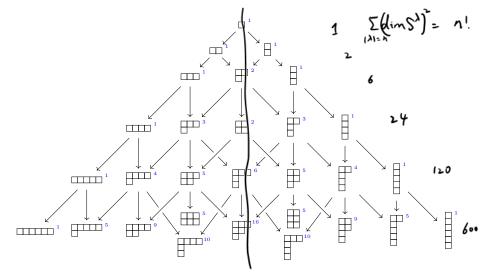

$$\dim S^{\lambda} = \#\{\text{standard tableau of } \lambda\} = ?$$

$$\dim S^{\lambda} = \sum_{\substack{\lambda' \subseteq \lambda \\ |\lambda'| = n - 1}} \dim S^{\lambda'}$$

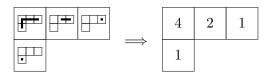

<ロ > ← 回 > ← 回 > ← 巨 > ← 巨 → り へ ○

Hook length formula

It helps us compute the dimension of S^{λ} without induction. Step 1: count the length of hook.

Step 2:
$$\dim S^{\lambda} = \frac{n!}{\prod (\mathsf{hook\ lengths})}$$

Special case: (m, l)

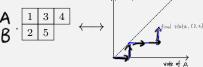

Ballot problem

In an election where candidate A receives m votes and candidate B receives l votes with $m \geqslant l$, what is the probability that A will be (non-strictly) ahead of B throughout the count?

Proposition

Each process of the count corresponds to each standard tableau of form (m,l).

Example

vote of A

Special case: (m, m)

Corollary

$$\dim S^{(m,m)} = C_m = \frac{1}{m+1} \binom{2m}{m}.$$

where C_m is the m-th Catalan number.

Special case: (m, m)

Corollary

$$\dim S^{(m,m)} = C_m = \frac{1}{m+1} \binom{2m}{m}.$$

where C_m is the m-th Catalan number.

Catalan number has many interpretations. For example, it counts the number of crossingless matchings of 2m points.

200

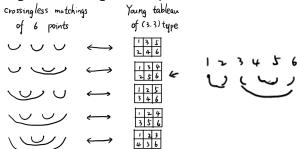

Special case: (m, m)

Corollary

$$\dim S^{(m,m)} = C_m = \frac{1}{m+1} \binom{2m}{m}.$$

where C_m is the m-th Catalan number.

Catalan number has many interpretations. For example, it counts the number of crossingless matchings of 2m points.

200

Goal of the Part II

- Definition of Springer fiber;
- Some examples of Springer fiber;
- Properties: (closely connected with combinatorics)
 - irreducible component?
 - dimension?
 - affine paving? CW complex?
 - cohomology? ring structure?
 - smooth?
 - explicit description?
- Weyl group action on top homology.

Goal of the Part II

- Definition of Springer fiber;
- Some examples of Springer fiber;
- Properties: (closely connected with combinatorics)
 - irreducible component?
 - dimension?
 - affine paving? CW complex?
 - cohomology? ring structure?
 - smooth?
 - explicit description?
- Weyl group action on top homology.

Definition

Let $X \in \mathfrak{g}$ be a nilpotent element. The Springer fiber B_X over X is defined as

$$B_X := \mu^{-1}(X)$$

$$= \{B \in \mathfrak{B} \mid X \in B\}$$

$$= \{0 \subseteq V_1 \subseteq V_2 \subseteq \dots \subseteq V_n = \mathbb{C}^n | XV_i \subseteq V_{i-1}\} \operatorname{dim} V_i = i$$

Xiaoxiang Zhou Bonn u Springer Fibers for $SL_n(\mathbb{C})$

By the Jordan normal form, we have

$$\left\{ \begin{array}{c} \mathsf{Nilpotent\ element} \\ \mathsf{in\ } \mathfrak{gl}_n(\mathbb{C}) \end{array} \right\}_{\left/ \mathsf{conj}} \longleftrightarrow \qquad \left\{ \begin{array}{c} \mathsf{Young\ diagram} \\ \mathsf{of\ } n \mathsf{\ boxes} \end{array} \right\}$$

$$X_{\lambda} = \operatorname{diag}(\underbrace{J_{\lambda_1}, \ldots, J_{\lambda_1}}_{v_1}, J_{\lambda_2}, \ldots, J_{\lambda_k}) \longleftrightarrow \lambda = \lambda_1^{v_1} \cdots \lambda_k^{v_k}$$

$$J_{\lambda_1} = \begin{bmatrix} \mathbf{0} \mathbf{1} \\ \mathbf{0} \mathbf{1} \end{bmatrix}_{\mathbf{\lambda} \times \lambda_1}$$
 Denote $B_{\lambda} := B_{X_{\lambda}}$.
$$B_{X} \cong B_{gXg^{-1}} \text{ for any } g \in G$$

$$B_X \cong B_{gXg^{-1}}$$
 for any $g \in G$

Theorem (we will not give the proof.)

As S_n -representation, $S^{\lambda} \cong H_{top}(B_{\lambda})$.

Corollary

 $\#\{\text{irreducible component of } B_{\lambda}\} = \dim S^{\lambda}$

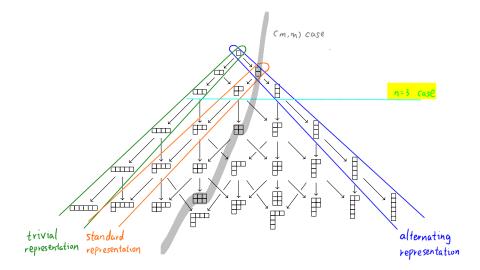

《四》《圖》《意》《意》

Goal of the Part II

- Definition of Springer fiber;
- Some examples of Springer fiber;
- Properties: (closely connected with combinatorics)

tree of Young diagram

Example:
$$\lambda = 3$$

$$\begin{array}{l}
X_{\lambda} = \begin{bmatrix} 0 & 1 \\ & 0 & 1 \\ & & 0 \end{bmatrix} \\
B_{\lambda} = \left\{ 0 \subseteq \langle ? | \rangle \subseteq \langle ? | , ? \rangle \subseteq \mathbb{C}^{3} \right\} \land X_{\lambda} = \{*\}$$

In general, $B_{\lambda} = \{*\}$ when λ has only one row.

Example:
$$\lambda = (1, 1, 1)$$

$$X_{\lambda} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$$B_{\lambda} = \left\{ 0 \subseteq \langle ? \rangle \subseteq \langle ? , ? \rangle \subseteq \mathbb{C}^{3} \right\} \land X_{\lambda} = \mathcal{F}\ell(3)$$

In general, $B_{\lambda} = \mathcal{F}\ell(n)$ when $\lambda = 1^n$.

Properties of $B_{\lambda} = \mathcal{F}\ell(n)$

- irreducible: 🗸
- $\dim B_{\lambda} = \frac{n(n-1)}{2}$ CW complex: 2 Schubert Cell
- cohomology group:
- smooth:
 √
- explicit description: Floral chart
- Weyl group action on $H_{top}(B_{\lambda}) \cong \mathbb{C}$:

Example:
$$\lambda = (2,1)$$

truncate.

$$X_{\lambda} = \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}$$

$$B_{\lambda} = \left\{ 0 \subseteq \langle ? \rangle \subseteq \langle ? , ? \rangle \subseteq \mathbb{C}^{3} \right\} \land X_{\lambda} = \mathbb{P}^{1} \lor \mathbb{P}^{1}$$

$$e, \quad e, ?$$

$$e, \quad e, ?$$

$$\exists \begin{cases} 0 \subseteq \langle e, \rangle \in \mathcal{C}, \quad be_{\lambda} + ce_{\delta} \rangle \subseteq \mathbb{C}^{3} \end{cases} \rightarrow \mathbb{P}^{1}$$

$$\exists \begin{cases} 0 \subseteq \langle e, \rangle \in \mathcal{C}, \quad be_{\lambda} + ce_{\delta} \rangle \subseteq \mathbb{C}^{3} \end{cases} \rightarrow \mathbb{P}^{1}$$

$$\exists \begin{cases} 0 \subseteq \langle e, \rangle \in \mathcal{C}, \quad be_{\lambda} + ce_{\delta} \rangle \subseteq \mathbb{C}^{3} \end{cases} \rightarrow \mathbb{P}^{1}$$

P' &= \begin{bmatrix}
A_{1} & A_{2} & A_{2}$$

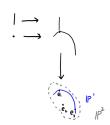

$$\pi^{-1}([e_1]) \cong B_{1,1} \qquad \pi^{-1}([e_3]) \cong B_2 \qquad \pi^{-1}([e_2]) \cong \emptyset$$

$$\pi^{-1}([ae_1 + e_3]) = \left\{0 \subseteq \langle ae_1 + e_3 \rangle \subseteq \langle ?, ? \rangle \subseteq \mathbb{C}^3\right\} \cap \begin{bmatrix}0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 0 \\ 0 \subseteq \langle f_3 \rangle \subseteq \langle ?, ? \rangle \subseteq \mathbb{C}^3\right\} \cap \begin{bmatrix}0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 0 \\ 0 = \langle f_3 \rangle \subseteq \langle ?, ? \rangle \subseteq \mathbb{C}^3$$

4 D > 4 A > 4 B > 4 B >

For
$$\lambda=(2,1)$$
, $B_\lambda\cong\mathbb{P}^1\vee\mathbb{P}^1$:

$$\begin{bmatrix}
P' &= B_n & \longrightarrow \\
\uparrow * \end{bmatrix} &= B_n & \longrightarrow \\
B_{n,n} & \downarrow & \downarrow \\
\downarrow & & \downarrow & \downarrow \\
P^1 &= \begin{bmatrix} * * \end{bmatrix} & \downarrow & \downarrow \\
[e_1] & [e_1 + e_2]
\end{bmatrix}$$

$$\pi^{-1}([e_1]) \cong B_{1,1} \qquad \pi^{-1}([e_3]) \cong B_2 \qquad \pi^{-1}([e_2]) \cong \emptyset$$

4 D > 4 A > 4 B > 4 B > B = 40 Q C

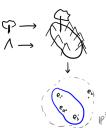

Example: $\lambda = (2, 1, 1)$

$$X_{\lambda} = \begin{bmatrix} 0 & 1 & & \\ & 0 & & \\ & & 0 & \\ & & & 0 \end{bmatrix}$$

$$\underline{B_{\lambda}} = \left\{ 0 \subseteq \langle ? \rangle \subseteq \langle ? , ? \rangle \subseteq \langle ? , ? , ? \rangle \subseteq \mathbb{C}^4 \right\} \land X_{\lambda}$$

$$\emptyset (3) = \underbrace{B_{0,0}}_{B_{0,0}} \longrightarrow B_{0,0,0} \\
\downarrow \pi \\
\downarrow P$$

Example:
$$\lambda = (2, 1, 1)$$

$$X_{\lambda} = \begin{bmatrix} 0 & 1 & & \\ & 0 & & \\ & & 0 & \\ & & & 0 \end{bmatrix}$$

$$B_{\lambda} = \left\{ 0 \subseteq \langle ? \rangle \subseteq \langle ? , ? \rangle \subseteq \langle ? , ? , ? \rangle \subseteq \mathbb{C}^4 \right\} \land X_{\lambda}$$

$$\stackrel{\bigcirc{}_{\bullet}}{\wedge} \rightarrow \stackrel{\bigcirc{}_{\bullet}}{\wedge}$$

Example:
$$\lambda = (2, 2)$$

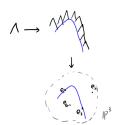

$$X_{\lambda} = \begin{bmatrix} 0 & 1 & & \\ & 0 & & \\ & & 0 & 1 \\ & & & 0 \end{bmatrix}$$

$$\underline{B_{\lambda}} = \left\{ 0 \subseteq \langle ? \rangle \subseteq \langle ? , ? \rangle \subseteq \langle ? , ? , ? \rangle \subseteq \mathbb{C}^4 \right\} \land X_{\lambda}$$

$$|P' \lor P' = B_{s,s} \longrightarrow B_{s,s}$$

$$\downarrow^{\pi}$$

$$|P^{3} \lor S_{4}|$$

Example:
$$\lambda = (2, 2)$$

$$X_{\lambda} = \begin{bmatrix} 0 & 1 & & \\ & 0 & & \\ & & 0 & 1 \\ & & & 0 \end{bmatrix}$$

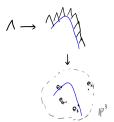

$$B_{\lambda} = \left\{ 0 \subseteq \langle ? \rangle \subseteq \langle ? , ? \rangle \subseteq \langle ? , ? , ? \rangle \subseteq \mathbb{C}^{4} \right\} \land X_{\lambda}$$

$$|P' \vee P'| = |B_{a,i} \longrightarrow (B_{a,i} \times \mathbb{R}^{n})$$

$$|P'| = |P'| = |P'| = |P'|$$

$$|P'| = |P'|$$

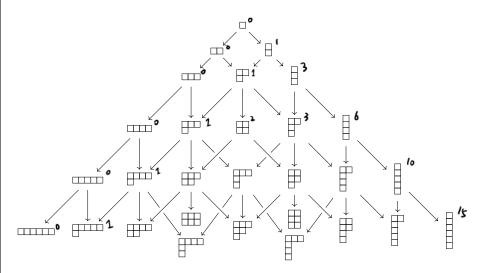

$$|P'$$

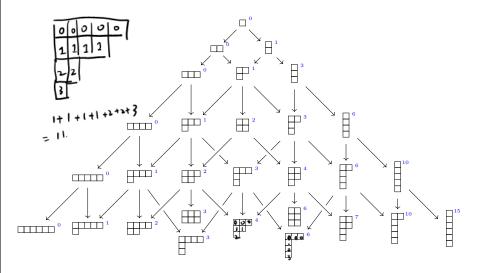

Using the same technique, we can get

- B_{λ} has an affine paving \rightsquigarrow cohomology;
- Each irreducible component in B_{λ} has same dimension;
- It's easy to compute the dimension and the number of irreducible component.

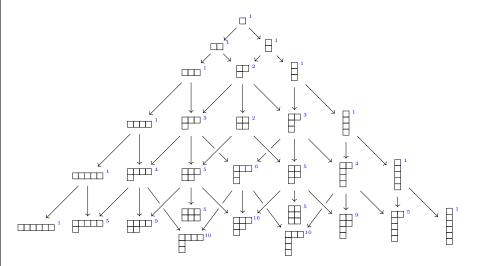

Game: compute!

Answer: dimension

Answer: the number of irreducible component

Smooth problem

Results

- Not all the the irreducible components of B_{λ} are smooth; For example, one component of $B_{2,2,1,1}$ is not smooth.
- All the components of B_{λ} are nonsingular iff

$$\lambda \in \{(\lambda_1, 1, 1, \ldots), (\lambda_1, \lambda_2), (\lambda_1, \lambda_2, 1), (2, 2, 2)\}$$

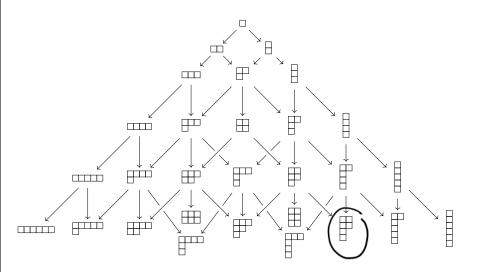

tree of Young diagram

(m,m) case

We have an explicit description in the 2-row case when we forget the variety structure. Use this description, we can get the cohomology group structure.

Definition and Theorem

Let α be a crossingless matching, define

$$\tilde{B}_{\alpha;m,m} := \left\{ (x_1, \dots, x_{2m}) \in (\mathbb{P}^1)^{2m} \middle| x_i = x_j \text{ if } (i,j) \in \alpha \right\} \subseteq (\mathbb{P}^1)^{2m}$$

$$\tilde{B}_{m,m} := \bigcup_{\alpha} \tilde{B}_{\alpha;m,m} \subseteq (\mathbb{P}^1)^{2m}$$

then we have a homeomorphism

$$B_{m,m} \cong \tilde{B}_{m,m}$$

Xiaoxiang Zhou Bonn Springer Fibers for $SL_n(\mathbb{C})$

(m,m) case

Definition and Theorem

Let α be a crossingless matching, define

$$\tilde{\underline{B}}_{\alpha;m,m} := \left\{ (x_1, \dots, x_{2m}) \in (\mathbb{P}^1)^{2m} \middle| x_i = x_j \text{ if } (i,j) \in \alpha \right\} \subseteq (\mathbb{P}^1)^{2m}$$

$$\underline{\tilde{B}_{m,m}} := \bigcup_{\alpha} \tilde{B}_{\alpha;m,m} \subseteq (\mathbb{P}^1)^{2m}$$

then we have a homeomorphism

$$\begin{array}{c} \mathbb{F}_{\bullet} = \operatorname{Proj}_{\bullet}(O(\mathbf{z}) \oplus O(\mathbf{p}^{\prime})) & \mathbb{F}_{\bullet}(\mathbf{p}) = \operatorname{torus}_{\bullet}(\mathbf{p}) \\ \mathbb{E} \times \operatorname{comple}_{\bullet}(\mathbf{p}) & \mathbb{F}_{\bullet}(\mathbf{p}) = \operatorname{torus}_{\bullet}(\mathbf{p}) \\ \alpha = \{(1,2),(3,4)\} & \tilde{B}_{\alpha;2,2} = \{(x_1,x_1,x_2,x_2) \in (\mathbb{P}^1)^4\} \cong (\mathbb{P}^1)^2 \\ \beta = \{(1,4),(2,3)\} & \tilde{B}_{\beta;2,2} = \{(x_1,x_2,x_2,x_1) \in (\mathbb{P}^1)^4\} \cong (\mathbb{P}^1)^2 \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \vee \mathbb{F}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} \\ \mathbb{F}_{\bullet} \times \mathbb{P}^{\prime} & \mathbb{F}_{\bullet} \times \mathbb{P}$$

Xiaoxiang Zhou Bonn

Thank you for listening!
Thank Rui Xiong for providing the package of Young diagram,
Thank my roommate David Cueto for pointing out typos,
Thank Prof. Eberhart for offering valuable materials and advice!
